

Veitchi Flooring book Recofloor collections for Baird Family Hospital project

By using Recofloor's on-site collection service for NHS Grampian's new Baird Family Hospital and Anchor Centre, Veitchi Flooring is set to save around 2,300 square metres of vinyl offcuts from landfill.

Veitchi Flooring is one of the UK's largest flooring contractors, working on projects of all types nationwide. The firm has a strong commitment to improving sustainability in the industry.

On being awarded the flooring contract for the project (located at Aberdeen Royal Infirmary), Veitchi recognised that offcut disposal would present a major environmental challenge. With 23,000 m² of Polyflor vinyl to be laid, the typical 10% expectation for offcuts meant a likely project wastage of 2,300 m² - an area similar to the size of 10 tennis courts.

Aware that vinyl is easily recyclable and having previously used Recofloor for collections of material from their own premises, Veitchi contacted the Recofloor team. It soon became clear that Recofloor's straightforward on-site collection and recycling service was the obvious solution.

Main contractor Graham Construction immediately bought into the idea, while the green approach fitted perfectly with NHS Grampian's Plan for the Future.

Recofloor Deployment

The first step was to agree where the Recofloor collection bins should be placed. Veitchi have a 'good housekeeping' ethos, so it was essential to ensure fitters could dispose of material easily as work progressed. Thanks to proactive support from Graham, a location plan was quickly agreed. The plan includes using telescopic forklifts to lift the bins to upper external levels, from where the bins can be wheeled into the building as needed.

Work is now well underway, and the fitters have been able to slot the collection process seamlessly into their daily routine. Three bin changeovers have taken place so far, booked and paid for via Recofloor's simple online system.

A feature that has proved particularly useful is the fact that the bins are lockable. This gives Veitchi's team full control of who uses the bins and what goes in them, preventing cross contamination.

Work is now well underway, and the fitters have been able to slot the collection process seamlessly into their daily routine. Two bin changeovers have taken place so far, booked and paid for via Recofloor's simple online system.

All the vinyl collected is being taken back to Polyflor's UK plant for sorting. It will then either be recycled into new flooring by Polyflor or sent to a UK recycler for the production of traffic cones. So, in addition to diverting the waste from landfill, Veitchi is also ensuring precious raw materials are re-used and helping reduce the project's carbon footprint by around 8 tonnes.

As an added bonus, the cost of the Recofloor collections is significantly less than that of landfill disposal or skips, with costs for the 1100lt metal Recofloor bins set at £35 per bin.

Comments:

"The construction industry is known as one of the worst for waste production. Here at Veitchi, we want to play our part in driving change and have introduced a variety of green initiatives. Recycling vinyl is a no-brainer, and the Recofloor scheme makes it simple. The Recofloor team explained the collection service clearly, and the guys find the process extremely easy to use. They are also happy to be playing their part in recycling on the site. We will definitely be using Recofloor's on-site collection service for other large projects in future!"

*Ed Murison, Contracts Manager, Veitchi Flooring,
Flooring Contractor*

"Construction waste reduction and the circular economy are key strands in GRAHAM's environmental mission. Building on existing successes in reducing waste to landfill, we've set a target of a 50% reduction in construction waste by 2030. Veitchi's use of the Recofloor vinyl take back scheme is a great example of how supply chain support can help us reach that goal. And - importantly - our site team report smooth on-the-ground processes. Clearly labelled, lockable bins meant that contamination was easily avoided, and the impressive collections turnaround time made the scheme easy to work with."

*Fiona Walker, Environmental Advisor,
GRAHAM Construction*

Recofloor is the leading take-back collection scheme founded by Polyflor and Altro for recycling commercial waste vinyl generated from all types of projects. All collected material is recycled and used in new products, including flooring. If you are thinking of deploying Recofloor on a project site, please get in touch to discuss your requirements.
